

Quick Start: Digitzs Direct Integration

What You Need Right Now

Your TokenEx account is temporarily disabled, but you can still process payments using the **direct Digitzs/NMI integration** connected to the same Propay MID 33595002.

Step 1: Get Your Security Key (5 minutes)

Log into Digitzs Gateway

1. Go to: <https://digitzs.transactiongateway.com>
2. Log in with your merchant credentials

Find Your Security Key

1. Click **Settings** in the top menu
2. Select **Security Keys**
3. Click **API Security Keys** tab
4. Copy the 32-character key (looks like:

2F822Rw39fx762MaV7Yy86jXGTC7sCDy)

Don't have a key? Click "Generate New Key" button.

Step 2: Add Key to Supabase (2 minutes)

Via Dashboard

1. Open your Supabase project: <https://hpps bqucfklrrytfftye.supabase.co>
 2. Go to **Edge Functions** → **Secrets**
 3. Click **Add new secret**
 4. Enter:
 - Name: `DIGITZS_SECURITY_KEY`
 - Value: [paste your 32-character key]
 5. Click **Save**
-

Step 3: Test the Integration (2 minutes)

Open Your Application

1. Navigate to your site
2. Go to the Dinosaur Island tickets page
3. Click "Get Tickets"
4. Select an event

Complete Test Transaction

Fill in the form:

- First Name: Test
- Last Name: User
- Email: test@example.com

- Phone: 5551234567

Enter test card:

- Card Number: 4242 4242 4242 4242
- Expiry: 12/25
- CVV: 123

Submit Payment

Success Indicators

✓ No "security key missing" error ✓ Payment processes successfully ✓ You receive a transaction ID ✓ Success message appears

That's It!

Your direct Digitzs integration is now live and processing real payments through Propay MID 33595002.

What Happens Now

Current Flow:

```
Customer → DigitzsCheckout → digitzs-direct edge function →  
Digitzs Gateway → Propay MID 33595002 → Card Networks
```

When TokenEx Reactivates:

- The system will automatically switch back to TokenEx
- Direct integration remains as backup
- No code changes needed

- Same MID, same processor

Troubleshooting

Still Getting "Security Key Missing"?

1. Verify secret was saved:

- Supabase Dashboard → Edge Functions → Secrets
- Look for `DIGITZS_SECURITY_KEY` in the list

2. Check the key is correct:

- Log into digitzs.transactiongateway.com
- Settings → Security Keys → API Security Keys
- Copy the key again (no spaces or line breaks)

3. Test the key directly:

```
curl -X POST https://digitzs.transactiongateway.com/api/transact.  
-d "security_key=YOUR_KEY_HERE" \  
-d "type=validate"
```

Expected: `response=1&responsetext=SUCCESS`

Transaction Declining?

Check:

-  MID 33595002 is active in Digitzs portal
-  Card number is valid (use test card 4242424242424242)
-  Expiry date is in the future

-  Amount is reasonable (not \$0.00 or too large)

Need Help?

-

What You're Processing

Gateway: Digitzs white-label NMI **MID:** 33595002 (Propay) **Endpoint:** <https://digitzs.transactiongateway.com/api/transact.php> **Same as TokenEx:** Yes - same MID, same processor
